

Druva inSync

Unified Solution for Endpoint Protection & Collaboration

THE CHALLENGE

With the recent proliferation of laptops, smart phones and tablets, collectively called endpoints, employees increasingly:

- Leave critical data on laptops unprotected. Over 28% of corporate data resides exclusively on laptops, of which only 35% are regularly backed up.
- Expose sensitive corporate data on mobile devices, which they bring into the enterprise (BYOD trend).
- Create security and compliance issues for IT as they share files using consumer-grade applications.

These trends are creating challenges for IT, which must ensure that:

- Critical corporate data residing on endpoints is securely backed up.
- Sensitive corporate data residing on endpoints does not fall into wrong hands.
- Corporate data shared between employees and with external entities is secure.

IT must further ensure that:

- Endpoint solutions for backup and file sharing are not obtrusive to users.
- End users do not have to deal with multiple solutions for backup, file sharing and collaboration.
- IT Security and visibility do not compromise end user experience.

THE SOLUTION

Unified Solution for Endpoint Backup, File Sharing & Collaboration, and DLP

Druva inSync is the only solution that securely backs up endpoint data, protects data on endpoint devices, and enables employees to easily share files and collaborate with coworkers. inSync offers:

- **Award-winning backup** for laptops, smart phones and tablets.
- **Integrated file sharing & collaboration** with enterprise-grade security and IT policy management and visibility.
- **Integrated data loss prevention** with data encryption, geo-tracking, and remote data delete capabilities.
- **Rich data insights** with real-time federated search and detailed data composition reports.

Druva inSync is a life saver. From a business continuity perspective, it's incredible.
